

Space Tourism I

The current idea of space tourism is to fly into upwards of about 100km which will allow the passengers of a small capsule feel being weightless and see some the earth from 100km. This is currently below the levels of the ISS or space shuttle of about 250km.

Since people are willing to spend hundreds of thousands of dollars for this experience, the Global Asteroid Protection Society will make this an avenue of funding.

Using reduced speeds and a specially built Capsule, we can deploy people in to low-orbit and have them return safely in a comfortable and safe environment.

For those individuals who would like to sign up for this form of space tourism, please contact us at: Stoprocks@gmail.com
