

Space Tourism II

It has been the dream of generations to live amongst the stars, or at least to visit high orbit and live there for a period of time. This venture can be done now on-board the ISS or Russian, and soon to be Chinese Space Capsules. People willing to spend millions of dollars can go live about 250km off the surface of the earth in a low Geostationary (Geosynchronous) orbit.

Using reduced speeds and a specially built Capsule, we can deploy people in to low-orbit, form cabins and allow for activities in space. All this done in a safe and worry free environment.

For those individuals who would like to sign up for this form of space tourism, please contact us at:
