

Emergency considerations

The Global Asteroid Protection Society strives to guarantee protection to all our members, therefore our contributing Members have the benefit of ensuring their survivability in the time when there is a solar threat which can not be stopped and is unlikely that saving earth-based property is plausible. Our members' ability to survive comes from their forward thinking by being members of this unique society.

In the event of a no-stop occurrence, we will provide communication to all our members, no matter where they are via advance RF communication technology, which does not use satellites as the means of relay. We will provide locations which they can make their way to which will provide them high speed departure, and rendezvous with our space assets to ensure survivability in a safe and comfortable way.

During a non-stop occurrence, it should be noted that social society will likely breakdown and turn into a lawless society. Those without forward thinking will attempt to bribe or pay any amount for their survivability, but we will have a strict non-admittance policy which will prevent us from accepting non-members into any rescue scenarios.

Those who supplied Individual Contributions, Corporate Contributions, Anonymous Donations, Expertise Assistancess and/or Material Donations will be considered as friends of the society and if there is availability in their region, they will be the only exceptions to the non-admittance policy.
